Lip Systems For Loader Buckets

The Bucket Shop offers an extensive line of complete lip systems for loader buckets. For material rehandling we recommend one of our smooth edges. You also have a choice of lip systems for quarry mining. Of course, we'd like you to try the Henley BladeSaver II complete lip system. You may also choose to try our version of the Caterpillar Modulok Lip System. The design is from Caterpillar, but the high quality steel and the unsurpassed services are pure Hensley.

Weld On Lip Systems For Scoop Trams

Hensley cast alloy lip shrouds provide maximum wear and protection for the bucket lips used on LHD (load-haul-dump) tram loaders. Installation is fast and easy for these weld-on style lip shrouds; simply trim the shrouds to the required length.

Hensley has designed these shrouds with the following features.

- Extra material in high wear areas.
- Sharp contour for better penetration.
- Versatility to fit several different bucket widths.

These features add up a longer wear life and increased production between lip and shroud change-outs.

The next time you change your lip shroud call The Bucket Shop for service you can count on backed with the Hensley quality guarantee.

Mechanically Attached Lip Systems For Scoop Trams

Hensley's mechanically attached J-Bolt Edge for LHD Tram Loaders offers maximum bucket lip protection plus some advantages over conventional weld-on shrouds.

- The shrouds are constructed of a harder alloy as they do not require welding.
- Low profile/sharp contour designs allows for better penetration reducing cycle times and overall wear on tires and machine.
- Complete shroud change outs in minutes with only a wrench.
