

The Bucket Shop

The Bucket Shop

Our name says it all! Established in 1989 we specialize in the manufacture and repair of all makes and models of excavator, loader and front shovel buckets along with frost picks, thumbs, quick attaches and dozer blades.

If you are in the business of excavation, reclamation, mining, trenching, or any other earth-moving enterprise, The Bucket Shop would like to be your company of choice on construction and mining wear parts as well as attachments. Why choose Bucket Shop G.E.T. (ground-engaging tools) and attachments? Because we are experts at what we do and it shows in our products and service.

We manufacture and sell new & used attachments to not only machine manufacturers and distributors, but also dealers to actual end users. It is possible that you may be operating our attachments without knowing at this very moment.

Our 35,000 square foot facility is equipped with the latest in tooling and technology to support our efforts as specialists in the bucket industry. We are totally self sufficient and as such stock the steel sheets in bulk, manufacture our own pins, bushings and bosses as well as roll our own plate.

Under license we manufacture Hensley Buckets exclusively for the Canadian Market for all manufacturers of excavators with sizes through to the largest excavator made.

We understand and apply metallurgical theories to enhance bucket life through the use of only quality materials and workmanship, competitive pricing and a commitment to delivery deadlines (usually 3 to 5 days) and often from stock.

Customer Service:

Excellent service, from the time you contact us through the date of your shipment, ensures that your orders are complete and on time. This dependability makes it easier for you to plan your inventory.

We strive to build lasting relationships with our customers. With the aid of the latest techniques, equipment, and metallurgy, our staff will provide you with an affordable casting or bucket of superior quality delivered on time.
